## **Product Release Sheet - Release 2.926i**

**December 19, 1999**

6:32 AM 12/17/1999

2.926i - 10368Bos

1. The "CheckMark/Status" keys used for documents such as the Title Insurance Schedule B are now controlled on the \*site\* level within the recently introduced STRINGS.INI file. The new section is:

[Checkmarks]

Yes=

No=

For Windings font users, the values for these two Keys ("Yes" and "No") are:

Yes=254

No=168

For regular font users (e.g., "Times New Roman", "Arial", etc.), the values for these two Keys ("Yes" and "No") are:

Yes=088

No=095

If this section, and/or this INI file is \*not\* available, then the Windings font values will be used as a default.

2. Under certain special circumstances, Keys that were internally "split up" by Microsoft Word into various fragments (the RTF stream had carriage returns within the first 18 characters of the Key's region) would cause the key itself to be printed on the output UNI document, instead of the Key's correct value. This has been rectified.

\*\*\*

**Files affected:**

realpac2.exe  
db\b0000.dbf  
db\b0000.mdx  
db\rp\_wreg2.mdb  
system\scrns\_b.ini  
system\b0000.scf

**NOTES:**

If you need to implement the "text mode" (non-Wingdings font) version of Title Insurance Policies, be sure to then edit or create a STRINGS.INI file in your system site folder (e.g., ".. system\10123") with the new "Checkmarks" section as outlined above. You will also need to update your RTFs by *removing* the Wingdings font attribute to the CheckMark/Status keys in your Exhibit Bs.
